

## **Statement of purpose(SOP)**

I want to attain an expertise in software engineering to solve the real-world problems. This is most crop-up field today. As the field of technology rapidly expands and items such as machines become programmable, many new programming languages will arise to public focus. I endeavor to master all the computer languages that I can and mold them into practical applications for everyday usage.

I have great passion for software engineering, I had dream to get graduate and then masters from FAST(NUCES) in software engineering. Allah gave me an opportunity to render this. I always focus on main subject of the coding. I get inspirations from the famous personalities like Donald Knuth (typesetting language Tex) and Bill Gates (Microsoft) and I know that FAST(NUCES) university is best for this field.

My father is a teacher and there is no other financial income. He can't afford my fee because my brothers and sisters are also still studying. Some financial issues create obstacles to attain my goals, I hope Ehsan Trust will remove these obstacles.

I want to work for my country, our economy is going to be poor day by day due to only in-efficiency of the business objectives. Our economy will rise when we will produce the efficiency in business objectives which is only possible by using softwares because every business depends on efficiency of business objectives which is created by high-level software in the world today. Many software engineers go to abroad for better future, not focusing to make his country produce better future. I will do a great work on my country to get it on the top levels in the world. InshAllah.
